ABSTRACT OF THE DISCLOSURE

A LAN connector is connected with a LAN cable connector inserted thereinto. The LAN connector comprises a flexible portion formed outside a modem-cable-connector occupied space within a housing having a size accommodating the LAN cable connector being inserted thereinto, and a stopper portion formed within the modem-cableconnector occupied space. The stopper portion is 10 displaceable together with the flexible portion. When the modem cable connector is inserted into the housing, the flexible portion is not pushed and bent by the modem cable connector, and the stopper portion stops the modem cable connector. LAN cable connector is inserted into the housing, the flexible portion is pushed and bent by the LAN cable connector so as to cause the stopper portion to be withdrawn out of the modem-cable-connector occupied space.
